SUBTECHS RACQUETS

SPEED BEAM

The aerodynamic cross-section of the Speed beam maximizes swingspeed and power.

VARIABLE BEAM

The variable beam cross-section perfectly balances the power, control and spin of the racquet.

ELLIPTICAL BEAM

The elliptical cross section in the shoulder area creates more flex during impact and enhances feel.

POWER BEAM

The power beam cross-section enhances frame stability for maximized power and comfort.

BOX BEAM

The box beam cross-section stabilizes the frame for maximum control.

ELONGATED SHAFT

Elongated shaft for classic flex and feel appreciated on Tour since 1987

SPIN SHAFT

The spin shaft provides optimized lateral stability, creating higher spin potential

SPIN GROMMETS

Spin grommets allow for greater main string movement in all directions for maximizing power and spin.

SOUND GROMMETS

Sound grommets provide enhanced power via greater string movement and optimize sound and vibrations

POWER GROMMETS

The enlarged power grommets maximize string movement for increased power.

SPEED PATTERN

A special speed string pattern provides with the perfect mix of power under control.

SPIN PATTERN

The open 16/19 string pattern maximizes string snap-back for greater spin generation

CONTROL PATTERN

A more dense 16/19 string pattern provides the perfect mix of control and power

FLEX GROOVE

The deeper flex groove softens the cross section geometry in the shoulder area for enhanced impact feel.

FULL CAP

Full cap for signature impact feel and unmistakable sound.

HALF CAP

Half cap for perfect blend of signature impact feel and a good manoeuvrability.

SWEET ZONE

The special sweetzone is created through a rounded head shape with the widest stringbed section raised to the tip for modern play.

DIRECTIONAL DRILLING

Directional drilling combine increased power and sweetspot, delivering a plush impact feel.

GRAPHENE
360+

SPIRALFIBER
SECTIONS

ENERGY
YOU CAN FEEL

Graphene 360+ is the combination of HEAD's signature Graphene 360 technology for optimized energy transfer and the innovative SPIRALFIBERS for enhanced flex and a clean impact feel.

RADICAL

RADICAL RACQUETS NEW

No shot you can't play
A new frame enhances the performance of the Radical series, which has also been upgraded with Graphene 360+ technology for enhanced flex, clean impact feel and improved playability. With its perfect blend of power, control and spin, the Radical is designed for the versatile, all-court player.

HEAD FOOTWEAR

SPRINT PRO 3.0 SF

FOOTWEAR TECHNOLOGIES

COMFORT

OrthoLite®

OrthoLite®
With its innovative long-term cushioning, and lightweight, highly breathable foam, the OrthoLite® insole enhances comfort on and off the court. The moisture management helps to keep the foot cool, dry and comfortable. On top of that, the insole is machine-washable.

HEAD TRI-NRG
HEAD's complete support technology. First, NRG **N**utralizes impact in the heel area, then it is **R**igid in the midfoot area for excellent torsional support and finally it **G**enerates energy as you move forward for additional acceleration. Using different materials with different properties and densities in each area of the shoe are key elements in this HEAD footwear technology.

Sock Support System
Fully integrated elastic sock construction for initial comfort and better support.

HEAD Cooling System
Perforations in the outsole, midsole and sockliner ensure great ventilation in the bottom of the shoe. Also includes a breathable upper mesh material that provides optimal cooling.

STABILITY

DeltaStrap
Triangle shaped midfoot straps are integrated into the lacing for best stability and an individual fit.

HEAD Lockdown Strap
Midfoot straps integrated into the lacing system keep your foot in place.

HEAD Energy Frame
Inspired by our ski boots, the TPU wings guarantee the best stability when moving sideways. These stability elements have been specifically designed and developed for sports where lateral support is extremely important. This technology is a key element on all our stability products.

HEAD Heel Stabilizer 180°
TPU Brace that wraps around the heel for best fit and support.

HEAD Lateral Control
HEAD includes additional lateral stability on all our top performance shoes to help avoid rolling over during extreme slides.

DURABILITY

HEAD Hybrasion+
A special rubber compound developed for tennis shoes. Guarantees the best traction for all court surfaces while still providing excellent durability for players who slide a lot.

SuperFabric®
Extremely abrasion resistant and at the same time really flexible upper material.

HEAD Hybrasion
Non-Marking rubber compound that provides good grip and offers great durability on all surfaces.

HEAD Drift Defense
In order to have a complete durable shoe, the upper of a tennis shoe needs to be durable as well, especially around the toe and medial forefoot area. HEAD uses an abrasion resistant rubber or a TPU layer in the Drift Defence technology to protect this area during aggressive toe drags.

FOOTWEAR

REVOLT PRO 3.5

The HEAD REVOLT PRO 3.5 is a premium, all-court performance shoe for baseliners, with an optimal combination of comfort and stability. Now with a fresh upper design and new heel construction.

UPPER

Strong mesh with PU molded durability chassis
Internal TPU heel counter
Integrated lacing straps
Medial protection elements

STRINGS BASICS

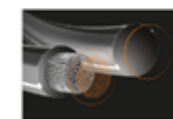

MONOFILAMENT

Monofilament strings have a simple construction, as they are extruded as a single filament that is stretched until the desired diameter or dimension is obtained. They are highly engineered products, due to the special Polyester material and the additives which are combined in complex production processes enhancing specific properties.

The elasticity of these strings provides excellent control and spin, and the combination of structure and material guarantees long lasting performance for high level players. The cross section can be engineered in a variety of ways: shaped to increase bite on the ball and spin potential, and coated to maximize wear resistance and improve string movement.

HYBRID

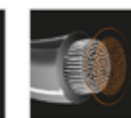

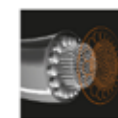

Hybrids are made by a combination of different strings in the mains and in the crosses of the racquet. The difference between mains and crosses lies in material, dimension, construction or shape.

In this combination the main strings primarily determine the spin potential, the control, and the overall feel and durability of the string bed. The cross strings are responsible for the comfort level, the power, and the outgoing angle that affects the trajectory of the ball.

The hybrid string setup allows players to combine the benefits of each individual string, based on its placement in the mains and crosses.

MULTIFILAMENT

Multifilament strings are complex. They are a twisted construction with hundreds or even thousands of synthetic microfilaments.

These micro-filaments can be different dimensions, shapes or materials. HEAD uses traditional round filaments and also specially engineered ribbons. The micro-filaments are assembled within a synthetic resin matrix to create a softer impact feeling or more lively touch. The strings are then coated with a thin layer of thermoplastic material, with special additives that increase wear resistance and ensure perfect realignment after every shot. Multifilament strings are very arm friendly, comfortable and powerful, providing a high level of performance.

SOLID CORE WITH OUTER WRAPS

This type of string features a solid core monofilament nylon construction. It offers variable sizes, different dimensions, or can be co-extruded with other thermo-plastic materials. The core is encased by one or more wraps of microfilaments with varying diameters or materials, and the construction is coated with one or more layers of thermo-plastic materials. Special additives are included to reduce the friction of the surface and to increase the durability.

These strings provide a crisper feel compared to multifilament strings and a more balanced combination of power and control. These strings offer a great all-around playability for a wide range of players.
