REGULATORS

DFC - DYNAMIC FLOW CONTROL:
Minimizes intermediate pressure drop during inhalation thus maximizing gas delivery, especially under extreme conditions.

AST - AUTO SEALING TECHNOLOGY:
Pneumatic dry system, protects against water entering the 1st stage.

NCC - NATURAL CONVECTION CHANNEL:
Increases cold water performance by creating a flow of water across the regulator. The flow is driven by the change of density in water with temperature.

OPD - OPTIMIZED PORT DESIGN:
Ensures that the pressure gauge's hose is always pointing downwards, regardless of first stage orientation.

TWIN POWER SYSTEM:
Flow control manages the delivery rate of your gas, from natural breathing to power breathing. The former is the traditional way of breathing a Mares regulator, (VAD) while the latter (VAD+) provides an extra push when you need it.

VAD - VORTEX ASSISTED DESIGN:
The air bypass tube delivers air to the mouthpiece creating a swirling vortex with a low pressure area in the center that keeps the diaphragm down during inhalation, for very sensitive and easy breathing at all depths.

ADJUSTABLE BREATHING COMFORT:
Allows the diver to change the second stage spring load which affects the breathing resistance.

PAD - PNEUMATICALLY ASSISTED DESIGN:
The second stage is accomplished by routing medium pressure air to the backside of the valve to help counteract the force of the spring. This allows the valve to open with less effort.

MESH GRID:
Patented design which reduces the impact of water flow onto the second stage diaphragm, thus eliminating free flows even in strong currents.

METAL TECHNOLOGY:
Outstanding mechanical reliability and high thermal conductivity make our metal 2nd stages extremely long lasting and ideal for cold water dives. The high thermal conductivity of metal reduces also the dry mouth feeling during the dive.

FLUID DYNAMIC DEFLECTOR:
Receives and properly directs the airflow from the bypass tube to the mouthpiece.

SUPERFLEX LP HOSE:
Extreme light weight and exceptional softness guarantee the maximum freedom of movement.

INSTRUMENTS

LCD COLOR DISPLAY:
State-of-the-art smartphone technology applied to dive computers (320 x 240 pixels / 262.144 colors).

FULL DOT MATRIX:
The next generation of dive computer displays: exceptional resolution allowing for total flexibility. The best user interface, the best dive display, no compromises.

SEGMENT / MATRIX AREA DISPLAY:
The perfect compromise between sharpness (segments) and flexibility (dot matrix) at a reasonable price.

SEGMENT DISPLAY:
Needle-sharp information combined and intelligent placement of information for easiest readability.

GAS INTEGRATED:
Provides all relevant gas related information such as tank pressure, time to reserve, and gas consumption resulting in a significant increase in safety.

GAS SWITCHING:
Setting the computer to include one or more oxygen enriched - gases (up to 99%) in addition to your main gas; allow you to benefit from shorter decompression times by switching gases during the dive.

MINERAL GLASS (TEMPERED):
Superior scratch resistance and improved readability in all diving conditions and viewing angles.

BCD'S

FUSION BLADDER:
Combines features of backmounted and classic bladder. High lift capacity, unrestricted movement and a comfortable position on the surface characterize this type of bladder.

BACKMOUNTED:
Aircell separated from the harness, resulting in unrestricted freedom of movement.

ERGO INFLATOR:
The standard inflation and deflation control device used in sanctioned training programs. Intuitive use and secure grip.

AIRTRIM:
Patented technology for easiest and precise buoyancy control in all positions and conditions. The control device is always at hand and placed in the most ergonomic position.

MONOPLATE BACKPACK:
Ideal for travelling thanks to its reduced dimensions and its marked weight reduction compared to a traditional backpack. Integrated rubber pads provide secure grip of the tank and carrying comfort.

SUSPENSION SYSTEM:
Inspired by the design of modern hiking backpacks, the system avoids direct contact between body and tank support.

SUITS

ULTRASTRETCH NEOPRENE:
Top of the range neoprene which delivers superior comfort during diving as well as when donning and doffing.

BACK PROTECTION SYSTEM:
Ergonomically shaped neoprene cushion between back and tank support for improved wearing comfort and extra warmth in a zone which is usually cold sensitive.

O-LOCK ZIPPER:
Soft, flexible waterproof zip ensures maximum freedom of movement and optimum thermal comfort.

S-LOCK ZIPPER:
Soft, flexible waterproof zip ensures maximum freedom of movement. Thermal comfort is increased by the zip coating which limits water entry.

MASTERSEAL ZIP:
Extremely sturdy and durable dry zipper. The new soft and flexible Masterseal zip ensures maximum freedom of movement and optimum thermal protection.

DOUBLE CONE:
The Double Cone System minimize the water flowin the most critical sealing areas like wrist and ankles.

THERMO PLUSH:
Extremely soft internal layer in the chest area to keep the upper part of the body warm. Thermo plush is durable and dries fast.

FINS

RIDDED FOOT POCKET:
The perforations prevent stagnating water flow from slowing you down. Eliminating this "parachute effect" you'll slide faster through the water. Furthermore the openings eliminate any suction effect, making doffing easier.

OPB - OPTIMIZED PIVOTING BLADE:
Allows the blade to maintain an optimal angle throughout the kicking cycle, whereas traditional fins achieve this only during a small portion of the cycle. OPB produces a constant thrust, which minimizes fatigue and produces fluid movement through the water.

CHANNEL THRUST:
Soft longitudinal inserts allow a controlled deformation of the fin blade while kicking. This channel shape moves a greater amount of water resulting in more thrust for the same effort.

TRI-MATERIAL CONSTRUCTION:
3 specific materials for maximum elasticity, high durability and resistance to aging. The result is superior performance in all diving conditions.

MASKS & SNORKELS

LIQUIDSKIN:
Patented Technology. The exclusive Bi-Silicone technology uses two different types of silicone: a firmer portion for support structure and a softer portion for contact with your face. It is 45% softer for unparalleled comfort and 270% more elastic for a perfect fit.

SUNRISE:
The Sunrise masks are dedicated to the Asian market and wider faces because of the special geometry of the skirt.

TRI-COMFORT:
Small horizontal ribs between the frame and the skirt in the area around the nose. These ribs absorb and redistribute the pressure exerted by the frame onto the skirt, with a resulting increase in comfort.

OPTICAL LENSES:
Mares offers corrective lenses for most models. In addition to the negative diopters, for some models also positive diopters are available. Mares design makes it quick and easy to install lenses.

ACCESSORIES

LIGHTS

MAGNETIC SWITCH:
The external magnetic switch protects the light from flooding. High reliability ensured by the complete absence of o-ring.

ADJUSTABLE FOCUS:
The focus can be adjusted during the dive by a simple rotation. It allows for a change in the light beam between 12° and 75°.

IN-HOUSE RECHARGEABLE BATTERY:
Rechargeable batteries are standard. The system allows recharging without removing the batteries from the flashlight.

BAGS

ATO - AIR TRAVEL OPTIMIZED:
The choice of extremely lightweight and resilient materials, in addition to the overall attention to details, make these products ideal for the travelling diver.

HEAVY DUTY WHEELS:
All Mares bags include rugged and durable construction wheels, secured with stainless steel screws.

BACKPACK SYSTEM:
Ergonomically designed shoulder straps are included and stored in an appropriate pocket.

FOLDABLE SYSTEM:
The product can be folded into itself in less than one minute to store it in small space.

EXTENDED RANGE

BREATHING SYSTEMS

The latest research regarding fish vision shows that they are capable of seeing ultraviolet rays which are invisible to the human eye. Contrasting colors are also more visible to them. We can obtain the best camouflage by reducing the contrast between colors with a polygonal design that changes with distance, but the most innovative feature of this material is its ultraviolet absorption. UV light is especially dominant on cloudy or grey days, and makes fluorescent materials brighter. The least reflective, UV ray absorbing color is **INDIGO**, the base for our new camouflage.

THE MARES LAB SERVICE TECHNICIAN TRAINING PROGRAM

Mares Service Technician Training Courses are available throughout the world and are designed and developed based on proven effective instructional system design principals. They are the dive industry’s first and only competency based service technician training courses offered worldwide that are produced and conducted by a major dive equipment manufacturer. This means you’ll receive the same high quality and educationally valid training regardless of where in the world you participate in a Mares Service Technician Training Course.
